

Safety Seminar

Lock Out Tag Out

Sponsored by 

OSHA estimates that Lockout/Tagout prevents 120 fatalities and 50,000 injuries annually. In addition, 29 CFR 1910.147, also called Control of hazardous energy (lockout/tagout), was the #3 most frequently cited standard by OSHA in general industry in fiscal year 2009.

Panduit will present a seminar highlighting the mandatory elements and requirements of a comprehensive Lockout/Tagout program for safe work practices and proper control of hazardous energy.

Seminar Includes:

- Background information on 1910.147, including statistics and reasons to use an energy control program.
- The 4 elements of a comprehensive Lockout/Tagout program will be covered in detail, including devices, training, procedures and inspections.
- The special cases of Lockout/Tagout will be discussed, as provisions for them must be included in a written company energy control program.
- Information on a proven process to become compliant and tools/templates to help get you started.

2 Seminars to Chose from: (Both Sessions are 11:30AM - 1:00PM)

Thursday, May 20th
