

Water / Wastewater

Solutions to Optimize Your Plant Operations

LOWER PROJECT & MAINTENANCE COSTS

With the rise in water quality standards, Water and Wastewater Professionals face significant challenges to maintain an aging infrastructure. Rumsey has the products and services to help improve existing control and distributions system. We also provide asset management strategies that reduce downtime and increase operational efficiencies.

EXPERT SOLUTIONS

Rumsey has the experts available to help you control energy use and manage your assets for improved optimization and security. Our network security, process control and motor control specialists can provide solutions to your unique issues and improve your system operations through increased visibility into the production process.

SERVICES

Installed Base Evaluation

When critical control systems are no longer supported, it puts your plant at risk. An IBE is a site delivered service that provides actionable intelligence to help you make data-driven decisions regarding the support and obsolescence management of your installed base assets. Services include:

- Identification of product lifecycle status via plant hierarchy
- Identification of migration/conversion priorities
- Identification of excess/shortage of spare parts
- Baseline for determining a Strategic Maintenance Program

Network Solutions

From network design, to switch configuration, to server virtualization, Rumsey can help manage your existing Ethernet/IP infrastructure and/or move legacy plant floor networks to Ethernet/IP. Our experts combine industry leading products with the latest technology and best-practices to make your transition seamless and worry-free. We understand the importance of a secure network and can help to reduce your risk and increase your strategic response.

Safety Training

Rumsey can help you avoid safety problems in the workplace and ultimately reduce risk with a Safety Evaluation from Hubbell Wiring. From wet areas, personal protection, and tripping hazards, to temporary power, motor disconnects, and safe repair and maintenance, the Safety Evaluation covers a wide variety of safety issues found in both industrial and commercial working environments.

Thermal Audits

Rumsey will schedule a thermal audit for all critical enclosures and create a cooling solutions package if needed. A thermal audit can include mapping heat loads, identifying temperature rating of the equipment, examining maintenance requirements, and more.

Repair & Exchange

When your electrical systems, mechanical components, or motors go down or need service, we can take the guess work out of the repair. Rumsey understands that your schedule is full and can offer pick-up and delivery to most tri-state area locations.

PRODUCT OFFERINGS

BELTS / CLUTCHES / COUPLINGS / GEARS

Altra
Martin Sprocket & Gear Inc.

CHAIN / FLIGHTS / SPROCKETS

Senqcia
