

## VC1514: Electrical safety program for decision-makers

The basic purpose of your electrical safety program should be to prevent accidents, injuries and equipment damage.

This course outlines a template approach on how to address these areas of concern to ensure that your electrical safety program is effective, as well as how to make some of the more difficult program decisions.

REALTIME-SAFETY's training products on " Electrical safety program for decision-makers" details this information in a way to make it easier to ensure your electrical safety program is able to achieve the ultimate goal which is worker safety!

This Micro-Learning curriculum includes the following modules:
