

VCS19336: Ladder Safety in Construction Environments

Ladders are one of the most used pieces of equipment in almost any work environment. From common stepladders to sophisticated extension ladders, they can be found almost everywhere.

REALTIME-SAFETY's training products on "Ladder Safety in Construction Environments" show that because they are so common, many employees take ladders for granted, and do not take the appropriate precautions when using ladders.

Topics covered in these products include:

- Ladder selection.
- Inspection before use.
- Setting up and moving ladders.
- Climbing on ladders.
- Ladder accidents.

This Micro-Learning curriculum includes the following modules:

- "Selecting the Proper Ladder"
- "Inspecting Ladders Before Use"
- "Setting Up and Moving Ladders"
- "Climbing Ladders"
- "Working on Ladders"
- "Ladder Accidents"
