

VCS15241: Warehouse Safety

Warehouses are very busy places, and that can give rise to a lot of hazardous situations. Every year, thousands of warehouse workers are injured on the job, and more fatalities occur in warehouses than in most other types of workplaces as well. But it doesn't have to be that way. To protect themselves against accidents, employees need to meet warehouse hazards "head on" by being "safety minded".

"Warehouse Safety" training from REALTIME-SAFETY helps employees to stay safe by identifying the specific hazards they can encounter while working in a warehouse and providing them with practical procedures they can use to avoid them.

Topics covered in these products include:

- Warehouse safety fundamentals.
- Materials handling basics.
- Pallets... packing, storing and stacking.
- Working safely with forklifts.
- Working safely on a loading dock.

This Micro-Learning curriculum includes the following modules:

- "Warehouse Safety Fundamentals"
- "Materials Handling Basics"
- "Pallets, Storing and Stacking"
- "Working Safely with Forklifts"
- "Working Safely on a Loading Dock"
